RE: Subject of Last-Deck Decking on AC2 Greentreat

To Whom It May Concern:

Last-Deck Decking is comprised of high grade, 6063 T-6 Aluminum with anti-corrosion properties. A TGIC Exterior Powder Coat Finish is electro statically applied and baked on both sides of the decking, which acts as a barrier between the aluminum and AC2 Greentreat. Over five years of directly applied Last-Deck decking to AC2 Greentreat, shows zero breakdown or corrosion when applied properly with stainless steel fasteners; inhibiting any electrolysis between the AC2 Greentreat and the aluminum decking.

Respectfully,

Levi Hillmer, PE
